**Subject:** time sensitive questions re: statewide WV stormwater construction permits  
**Attachments:** RW\_Inspection\_09122019.pdf

Chance and Scott,

Thank you very much for speaking with me recently about the statewide stormwater construction permit and Rockwool's authorization. The following are questions that you were not able to fully address over the phone, and I ask you to please address them prior to the October 23 hearing for Rockwool's permits, so that I can prepare my comments.

- 1) Which version of the statewide stormwater construction permit - if any - are current applicants (including Rockwool) receiving or potentially receiving authorization under? Chance said that the answer may differ based on the date when the applicant submitted for registration but was not able to give dates without first referencing the documents. Please clarify with dates when the "2012" permit expired, the date range "2019 version 1" was in effect, and which one is in effect currently (October 2019).
- 2) Approximately how many pending stormwater construction permit applications are there in the DWWMM at the moment and how does this compare to this time in a typical year?
- 3) If EPA does \*not\* approve the 2019 version #2 of the statewide stormwater construction permit (the one revised according to the settlement order), which permit will become effective?
- 4) Is Rockwool currently or has it previously operated without a valid registration under a stormwater construction permit in the state of WV? If no, what authorization allows it to continue operating and discharging stormwater until its pending permit is authorized? A recent site inspection (attached) notes that its registration expired February 9, 2019. However an inspection May 2019 stated that the expiration date was June 28, 2019. February matches my understanding that the 2012 permit expired when the 2019 permit went into effect. Either way, please explain what permit governs Rockwool's continued ground moving operations and discharges: regardless of any surface discharges, given the number of known sinkholes at the site including some that developed this spring, there certainly is and has been a discharge to the very sensitive karst system.

Thank you.
